

Camera Control System Connectivity

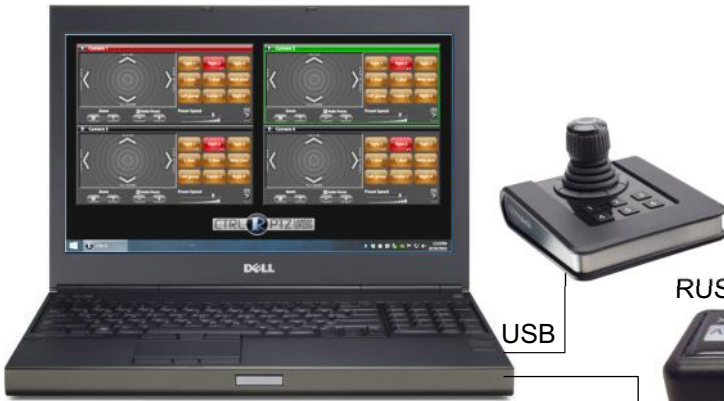

- Multi-Camera PTZ & PTX Software Control
- RUSHDOLLY Software Control
- Replace Traditional Hardware Controllers
- Touchscreen, Mouse, Joystick Control

RUSHWORKS MUX
12VDC / RS-422

Blackmagic
Micro Studio Camera 4K

Windows 7 / 8 / 10

Control up to 12 VISCA cameras from one USB 3.0 port using a multi-port hub and three MUX devices.

We replace traditional hardware controllers with versatile and scalable software control that lets you create, name and save a virtually unlimited number of presets. Using VISCA, LANC and analog remote control available on a wide range of camcorders and cameras, we integrate zoom, focus, iris and more into our camera control software.

Control standalone PTZ cameras from several manufacturers, or the RUSHWORKS PTX Universal PanTilt head that you can use with your favorite VISCA, LANC or Panasonic remote-compatible camcorder or camera. These include models from AJA, ARRI, Blackmagic, Canon, Datavideo, GoPro, JVC, Marshall, Panasonic, RED, Sony and more.

And now you can control the RUSHWORKS RUSHDOLLY Robotic Camera Platform as one of the sources, integrating PTZ and dolly motion in the same simple interface.
