Camera Control Software

Ctrl+R is the camera control software module embedded in VDESK and REMO, and available as a standalone utility for controlling PTZ cameras and RUSHWORKS PTX Universal PanTilt heads. You can control up to 12 serial or IP PTZ cameras, and many more PTX fixtures using daisy-chained DMX Protocol

The **Ctrl+R** application runs on Windows 7, 8 or 10 devices. It includes a RUSHWORKS USB to RS422 4-port MUX and four DEMUXES that provide RS422 serial control and 12VDC to PTZ cameras. It uses VISCA command protocol for the cameras, as well as for RUSHWORKS **PTX Universal PanTilt** heads. A 6-button joystick is also included.

It utilizes the **CLASSIC** User Interface which provides 9 user named and saved presets for each camera/fixture.

Ctrl+R replaces traditional hardware controllers with versatile and scalable software control that lets you create, name and save presets. Access shots instantly using a touch screen, mouse or keypad. We integrate zoom, focus and iris controls into our camera control software ... as well as complete control of cameras that support VISCA protocol.

Control standalone PTZ cameras from several manufacturers, or the **RUSHWORKS PTX Universal PanTilt** heads that you can use with your favorite camera using VISCA, LANC, or Panasonic Remote protocol.
