**Control Software for  
PTZ • PTX • SWITCHERS • RUSHDOLLY**

## Put Your CAMERAS IN MOTION!

**Ctrl+R** is the camera, switcher and dolly control software module embedded in VDESK and REMO, and available as a standalone utility for controlling PTZ cameras, video switchers, RUSHWORKS PTX Universal PanTilt heads, and the RUSHDOLLY.

The **Ctrl+R** application runs on Windows 7, 8 or 10 devices. It includes a RUSHWORKS USB to RS422 4-port MUX and four DEMUXES that provide RS422 serial control and 12VDC to PTZ cameras. It uses VISCA command protocol for the cameras, as well as for RUSHWORKS **PTX Universal PanTilt** heads. A 6-button joystick is also included.

**Ctrl+R** replaces traditional hardware controllers with versatile and scalable software control that lets you create, name and save presets. Access shots instantly using a touch screen, mouse or keypad. We integrate zoom, focus and iris controls into our camera control software ... as well as comprehensive control of cameras that support VISCA protocol.

It utilizes the **CLASSIC** User Interface which provides 8 user-named and saved presets for each camera/fixture.

- Name and Save Presets
- Dynamic Auto Zoom
- Software CCU for Cameras
- Motion Tracking (select camera models)
- Switcher Input Selection and Transition Control
