Multi-Camera PTZ & PTX Remote Production Systems

CLASSIC Interface

PRODUCER Interface

TalkingPoints Interface

REMO is a portable and ruggedized version of VDESK designed for rapid setup and strike on location. Available in two configurations, they include switcher, effects, transitions and Chroma key, with local encoding and streaming functions. They also include 15.6" touch screens, support 4 or 8 SDI, HDMI or analog inputs, a Hall-effect joystick, and control most PTZ cameras and **RUSHWORKS PTX Universal PanTilt Heads**.

REMO includes three unique user interfaces that let you work how you want, when you want. Use your iPad, Android or Windows tablet to control your VDESK over a wireless(N) network. Run the entire show from anywhere in the room.

Add the VDX T-Bar Control Surface option for even more control and accessibility during production. It includes shortcut keys for many transitions and effects, included Pip and double-box. You can also select cameras and individual presets for completely integrated production control.

The **UBEREMOTE** has four inputs (SDI or HDMI), weighing just 9 pounds, with dimensions of 9" x 10" x 6".

The **ISOTOWER** supports up to eight inputs, and can ISO record multiple camera inputs while simultaneously recording the Program mix.
