

TALK TAKE

TALK-TAKE™ is an “intelligent” video switching routine that automatically determines PTZ camera preset selection based on active microphone detection. It uses a set of user-definable rules for emulating the switching dynamics of a video operator. It’s included with the VDESK and REMO PRODUCER interface, and is great for meetings, teleconferences, and other venues where you want the shots to automatically follow the active microphones without an operator present.

VDESK™ LTD PRO PRO+ Integrated PTZ Production Systems

- **4 / 8 / 12 analog or SDI inputs**
